# 1 What is Metaelite Hunger Games

**METAELITE HUNGER GAMES** is a Metaverse GameFi P2E project which represents gamification and popularization of crypto trading through regular tournaments, battles to the death and challenges of survival with the goal of being the best game in the world.

This was inspired by the struggle for survival in most part of India, Africa and Asia after the first major COVID-19 outbreak lockdown and is lased with combat to ascertain premium entertainment.

Win battles and Win Big Prize Pools, NFTs as winners' reward and authorization access:

- Legal right to participate in the decision making of MEHG as a 'governor' NFT holder.
- Official Ranking of the World's Best Gamers

## 1.1 INTRODUCING MEHG

Welcome to the Meta Elite Hunger Games, a shattered land of beauty and wonder. Travel the vast and varied landscape fighting against other clans for survival in the best 3D gaming experience, confront other clans in battles to take over territory and rule over them, gain control over their lands, weapons and members of the clan. Weapons and clan members can be traded back into the system or amongst MEHG gamers worldwide.

Prior to launch of the game, \$MEHG holders may choose to stake \$MEHG to access the liquidity mining program (a type of 'yield farming' that has become popular with DeFi protocols where the founding teams seek to decentralize the governance of the protocol).

The purpose of the liquidity mining program is to distribute \$MEHG from the MEHG Treasury to early MEHG\_Champions community members to:

- 1) Achieve a distributed holding of \$MEHG tokens across more of the Meta Elite Hunger Game community,
- 2) Incentivise new people to participate in the MEHG\_Champions community,
- 3) Enable a more liquid and transparent market for the trading of \$MEHG.

The greater the size of the MEHG\_Champions community, the greater the prospects of decentralized governance as well as a self-regulating community that discourages bad actors and manipulation of governance and the game. Once the game is launched, users can stake \$MEHG as a signal of belief and support in the game and its governance model and receive access to governance and distributions from in-game fees.

A fully decentralized protocol: Meta Elite Hunger Games represents a new age in gaming. It has been engineered from the ground-up to support the long-term sustainability of the Meta Elite Hunger Games, governance and provide players with a AAA-rated blockchain gaming experience.

## 1.2 WHY DeFi?

The primary goal of the project is to create a fully decentralized game that can run autonomously. Over the last 18 months, and particularly in the last six, DeFi apps have seen impressive growth and rapid development. There are hundreds of DeFi projects gaining traction today—from trading, lending, and wallet interfaces, to assets and communities representing over 15B USD in value. DeFi allows us to leverage this exciting growth to bootstrap a solvent platform that can

hit the ground running for the increasing market interest in DeFi projects.

We are already starting to see a shift away from “novelty projects” that don’t add tangible value because ultimately they are unsustainable. We strongly believe a decentralized gaming economy provides the best fusion between crypto/blockchain/DAO enthusiasts and gamers looking for open access devoid of corporate interference.

There are currently no AAA gaming titles with cinematic quality 3D special effects in an interactive open-world RPG built in DeFi, and Meta Elite Hunger Games merges gaming and cryptocurrency in a unique synergy that holds allure for crypto enthusiasts, dedicated gamers, and the curious tech-savvy public. By having gorgeous, functional, 3D experience and rare NFTs, as well as a high replay value, Meta Elite Hunger Games will keep players interested in the \$MEHG protocol longer, ensuring the stability of the underlying NFT assets and the token pool.

(There are risks associated with DeFi, particularly staking and smart contract risk, and contract configurations are being developed continuously and subject to change and sentiment expressed by the Meta Elite Hunger Games community).

### **1.3 WHAT IS AN NFT?**

An NFT, or non-fungible token, is a crypto token representing a verifiably unique entity that is mutually interchangeable. The first NFT-like token was launched back in 2012 and was built on the Bitcoin blockchain. However, the most common NFT, ERC-721 is built on the Ethereum network.

NFTs became popular with the launch of CryptoKitties back in November 2017. Being a blockchain based game built on Ethereum, CryptoKitties was prone to multiple scalability issues. However, the

rarity of owning an NFT captured everyone's attention. Since then, add-ons and NFTs have found their way into many games, art and collectibles.

In MEHG players can purchase our limited edition NFTs from the HungergamesDEX or qualify to become holders by completing various in game task. Gamers will stake their character NFT in battles to the death where the winner takes all, the champion can also trade back won NFTs to the HungergamesDEX or with any other gamer interested in buying.

## 2 Game Overview

### INTRO

At first there was nothing and then we had MetaElite Hunger Games. By taking on the role of a MEHG champion you start your journey on Meta planet where you have to fend for yourself, mine weapons and armour along with other useful items you come across. You then begin your travels across a land of beauty and carefully maneuvering your way past natural hazards and bandits. You will see different people, cultures and tribes, discovering a world beyond your wildest imaginations.

During your travels across the vast and varied landscape you will encounter various tribes although, you will come across one tribe where you find refuge in a district, by learning and honoring their tradition and culture. After working hard, honing various skills and wielding ancient weapons you are worthy of becoming a MEHG champion, you will have to protect and help build your clan by taking on other districts and tribes to expand your territory.

You will become a warrior discovering god like powers and fight against other invading clans/districts in harsh intense clashing clan

wars, fighting for the honor and survival of your district where you will have to put everything on the line including your life.

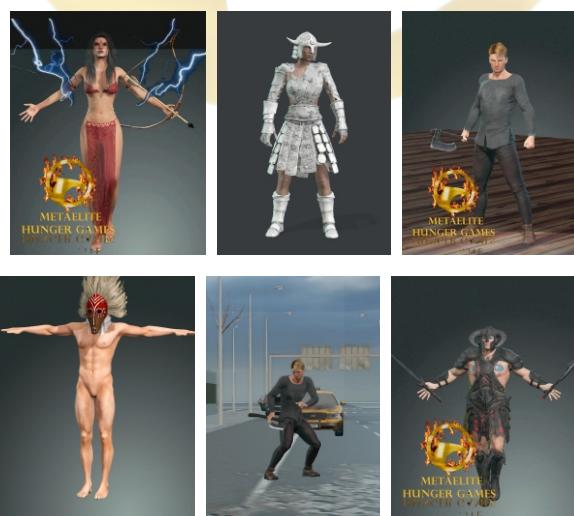

## 2.1 GOVERNORS

In MetaElite Hunger Games each of the districts under a tribe is protected and ruled by a governing body, these governing bodies are the Governors. The Governors are represented by limited edition NFTs that you can purchase from the HungergamesDEX or by completing tasks to qualify as a NFT holder.

The limited edition NFTs will mainly be won from special community building tasks and only a few will be available at the HungergamesDEX.

The governors are derived from Demi gods and some of the greatest ancient warriors from the various tribes, they all wield immense powers and terrifying strengths which makes them worthy of being rulers of the districts.

Governors will venture to other districts and try to exploit those districts. The governors will clash and battle for territory and land to expand their districts. These battles are wild and very intense confrontations to the death.

## **2.2 TRIBUTES**

The 5 tribes all have 10 governing bodies and 10,000 tributes that is a total of 50,000 tributes. The tributes will be represented by 50,000 NFTs that gamers can purchase via pre sales or at the HungergamesDEX, you can also qualify to become an NFT holder after completing various task. Gain access to higher level game tournaments, cool character skins, enhanced features and also select awesome weapons from a wide range of collection.

MEHG champions will fight other champions for the survival of their clan and to claim territory from others.

## **2.3 DISTRICTS**

In MEHG gamers will have to fight for the survival of their districts in intense battles with the risk of losing it all. MEHG provides you with five different tribes to select from (Indian Tribe, Asian Tribe, Pakistan Tribe, African Tribe and Latin American Tribe). Under each tribe they are ten districts.

You will have to build your district from scratch and climb your way up to the top. protect your districts by fighting off invading tribes and fighting for pieces of decentralized land on any of the MEHG districts in new edge 3D view gaming experience.

## **2.4 HOW DO I PLAY?**

Start by customizing your character and acquiring necessary weapons and items vital for your survival in case of any battle. You can then head out to explore the various regions of the world, and the mysteries that shatter it. As you start your adventure, you will encounter tributes ready to take everything from you, you must fight for your freedom and possess everything they own, although that is only one of your problems. You must always be on the tip of your toes keeping your eyes keen to watch out for natural hazards and traps

laid around.

You can also challenge a player to one on one combat and even a fight to the death which will involve staking the NFT of your character. Of course you will be able to get started in the game without any expense and learn the mechanics. We feel this is a welcome change from games that require a large amount of capital upfront to play. There are many regions to explore, but most will be inaccessible to the first generation of players.

Over time, players will unlock Obelisks which allow for travel to new, challenging, and important regions in the Districts that comes with new territorial battles.

## **2.5 BATTLE ARENAS (NO MAN'S LAND)**

All battles will be forth in No Man's Land, a wide natural landscape arena away from any District where players will choose to battle each other to prove who the superior champion is showing off their skills and strengths, fighting for the survival of their clan only one champion will triumph in these blood shedding fights to the death.

These players will queue in the Ranked Arena where they can be matched with a random opponent of similar skill level. players can also call out other players in ad-hoc wagered matches in No Man's Land Arenas. And to make it even more exciting other players will be able to spectate and wager on the outcomes of the matches.

## **2.6 HUNGERGAMESDEX (THE METAELITE HUNGER GAMES EXCHANGE)**

The MetaElite Hunger GamesExchange is an online marketplace, governed by the MEHG DAO, for players to buy and sell all in-game NFTs, Weapons and other items. The major component of the HungergamesDEX is the trading of Tributes, but all NFTs found in the game can be traded there.

### **2.6.1 IN-GAME PURCHASES**

All in-game purchases are being made using \$MEHG and fees sent directly to MEHG Liquidity.

- Tributes
- Weapons
- Armor
- Special Abilities (Powers)
- Imbuse (Modification of various elements in the game)

### **2.7 WEAPONS**

In No Man's Land, you don't just fight with your bare fist in the matches, you as the player character will get to choose from a wide range of ancient and powerful weapons with special power ups, making you readily equipped for battle against your opponents.

Your choice of weapons also determines your class, which gives additional benefits to your district. Weapons can be sold on the HungergamesDEX like other NFTs in the game.

### **2.8 ARMOR**

Also forged from items mined on Meta Planet, Armor is your defense against the champions you will battle. If your armor becomes too damaged you may need to wait until it regenerates. However, your choice of armor can sway the battle, as each suit has different properties.

Choosing the right one for you and your team is a step to victory and one of the many decisions you will make in the game. Armor can be sold or purchased on the HungergamesDEX like other NFTs in the game.

## 2.9 IMBUES

Imbues are cosmetic changes that can add value to a player's collection by further differentiating their acquisitions from others. Imbues are modular in nature and can be applied to multiple items, or you may decide to sell them on the HungergamesDEX. Various items in the game can be imbued, such as weapons, special powers, armors and even Lands.

## ③ Total Addressable Market

**3,240,000,000+** gamers all across the globe. (according to statista.com).

**79,000,000+** active crypto traders competing in professional skills, promoting themselves to investors and increasing their income. (according to DataLight.com).

**300+** cryptocurrency exchanges which demonstrate their capabilities, (extend/increase) customer base, sponsor and organize tournaments.(according to CoinMarketCap.com).

**50,000+** cryptocurrency service providers which promote themselves, increase their recognition, and attract new customers. (according to Chappuishalder.com).

## ④ How It Works

**Step 1:** Free gamer's registration in the MEHG database.

**Step 2:** Linking to your MEHG NFT exchange through your dashboard and purchasing of players (Tributes or Governors) NFTs, special powers and combat weapons.

**Step 3:** Place a challenge or accept a challenge, win and acquire huge prizes.

There are 5 different Tribes (Asian Tribe, African Tribe, Indian Tribe, Pakistan Tribe and Latin American Tribe), Each Tribe has 10 Governors, making a total of 50 Governors for each district.

Each districts have one governing body, and 1,000 Tribute (Players), The 50 governing bodies are represented with our 50 governing NFTs, and 50,000 NFTs representing the Tributes..

The Governing NFTs represents the Leader of each districts and also gives the user the Legal right to participate in the decision making of the project and sharing profit of out of 5% pool in Metaverse games and the 50,000 NTFs represent the 50,000 Tributes.

The Game is designed in a tournament system where each player fights for survival and protecting of their District/Clan.

A fight to the Death, Each player will have to stake the NFT of the character in play with the system before playing, the winner takes the NFT of the loser, which can be sold back to the system or to any Interested buyer, and this process will be facilitated easily and securely by the system.

Players are designed to have access to different combat weapons and enhanced character features such as special powers.

Combat weapons and enhanced features is keyed with NFTs lock features with the user using it's signature which enables trading of the assets.

METAELITE HUNGER GAMES is the Next Big thing in the Metaverse.

# 5 Advantages

## 5.1 FOR USERS:

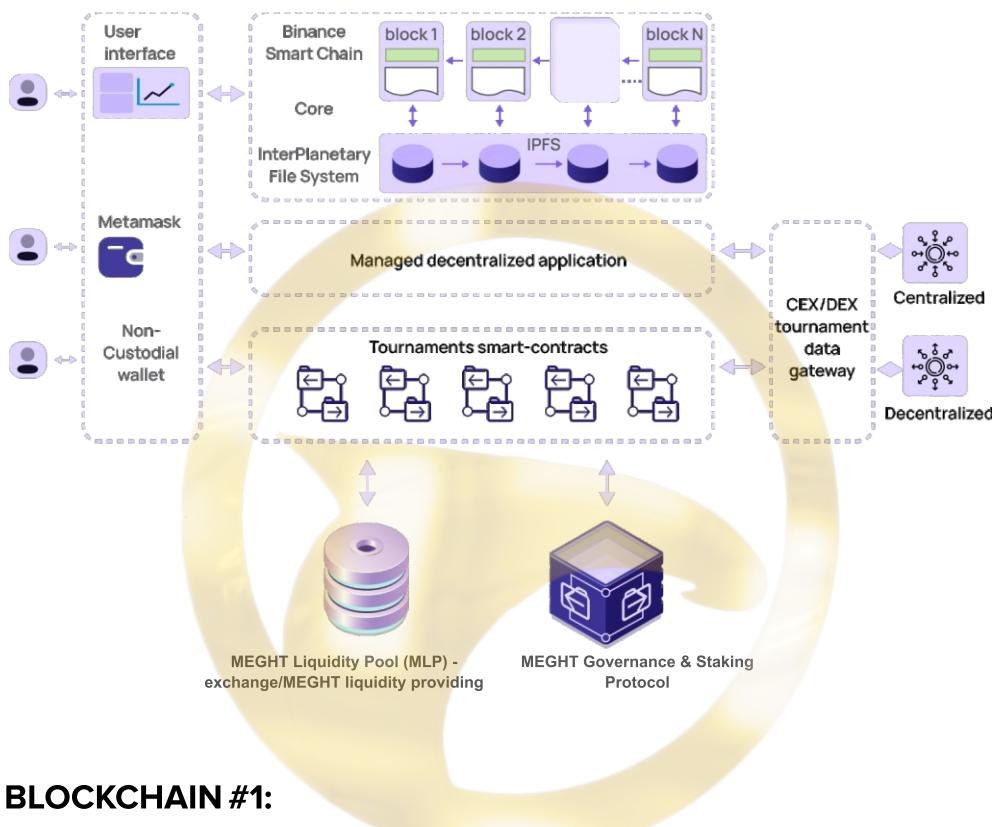

- Free registration and participation in the MEHG tournaments;
- User-friendly interface;
- Gaming skills rating and recognition;
- Attracting new players;
- Competing a high prize pool;
- Formation of the professional decentralized MEHG of Gamers and involvement in its development and improvement.

# 6 Tournaments

- **Calendar tournaments** - Daily/weekly/monthly/seasonal/annual official MEHG tournaments which are held regularly and don't have any limitation to take part in.
- **Master's tournaments** - MEHG sponsored tournaments, which rules and terms are agreed with the sponsors.
- **Private tournaments** - Limited-access tournaments which are organized independently by MEHG governor NFT holders, determining their terms, rules and participants.

# 7 Architectures

## 7.1 DECENTRALIZED AND DISTRIBUTED LOT ARCHITECTURE IS BASED ON A CORE OF TWO DISTRIBUTED REGISTERS

### BLOCKCHAIN #1:

BSC (Binance Smart Chain) is used as an optimal one from the perspective of:

- Transaction fee and technical characteristics.
- Ownership register and circulation of MEHG and its derivatives.
- Game NFT certificates.
- Implementation of tournament smart contracts and liquidity pool.
- Governance and other protocols.

Our choice of such technical solution, besides optimal transaction fees is based on constantly growing community (66 million unique blockchain addresses – 22.04.2021) and speed/volume of processed transactions (daily transactions increased by 600% as it reached 9 million in daily transaction volume (ETH ATH is 1.5 million transactions) (according to crowdfundinsider.com).

#### **BLOCKCHAIN #2:**

IPFS (Inter-Planetary File System) is a distributed file system integrated with the BSC for storing and accessing large amounts of game and graphical information also associated with the NFT.

## **7.2 DECENTRALIZED AND DISTRIBUTED MEHG ARCHITECTURE PROVIDES**

- All time players' assets control via BSC non-custodial wallets and tournament smart contracts.
- Tournaments' smart contracts with programmed and transparent logic of games distribution of prize pools and rating points.
- Unified transparent and automated rating logic.
- Decentralized mechanism of tokenization, commission distribution and MEHG liquidity supply.
- DAO-mechanism for protocol management and project development.

## **8 Monetization**

Project is built as a decentralized autonomous organization and doesn't aim to monetize operational activities. The project team and advisors is incentivized by MEHG tokens allocation that will be unlocked 1.5 years after the start of the project. The tournament and

protocol fees (liquidity pool exchange, staking, lending) will be charged to cover the operational and development costs of the project.

## 9 Governance/Utility Tokens (MEHGT)

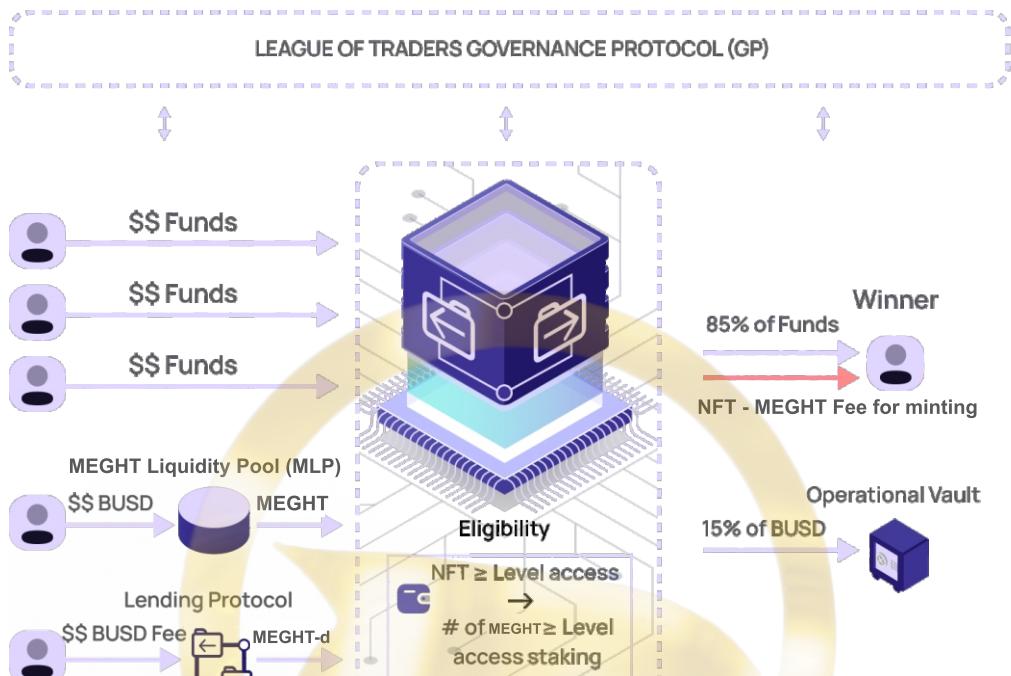

MEHGT is a BEP-20 utility and governance token limited to 50,000,000 (50 million) units.

Purpose of the token is to manage/govern the platform, reward users and encourage their activity.

MEHGT is used for;

- Play in tournaments (to pay a tournament pass).
- An access to the higher level tournaments, including those a player is not qualified for or does not have the adequate game NFT.
- Member/ Pro/ Expert/ Governor membership which gives them an access to additional MEHG functionality and privileges.
- “Governance” and “Staking” - an operational management and platform development. “Governance” deposit holders participate in “Governance staking” distribution of a limited number of MEHGT tokens (500,000 units) every 18 months on a “Proof of Stake” basis. The number of distributed tokens will be predetermined by a “halving” type model similar to BTC, with the exception of the fact that after each round there will be an equal amount left to be divided by two in the next round of accrual.
- “Lending” - MEHGT tokens with a BUSD commission fee being paid to players for “staking” MEHGTs to access the higher level tournaments.

# 10 An Overall Tournament Mechanic

Each tournament is implemented in the form of a smart contract to which each user transfers the tournament fee (TF) nominated in BSC token to participate.

TF is nominated in BSC tokens - but users can deposit in all major cryptocurrencies in the nearest future and have their funds automatically converted to BUSD for example and deposited to their non-custodial BSC (Binance Smart Chain) wallet for further transferring to the corresponding smart contract of the tournament.

If the player does not have the appropriate gaming status (Member/Pro/Expert/Governor) to be admitted to higher level tournaments, the MEHGT staking is required. The MEHGT is to be

procured from the MEHGT Liquidity Pool or lent from the MEHGT Lending Protocol.

Winner of the tournament gets ALL deposited BUSD funds except those distributed to Operational Vault (15%). The latter's funds are to be used to cover operational expenses related to protocol and infrastructure support.

NFTs game consists of tournament score weight and information and can be minted with MEHGT nominated minting fee by a player request.

MEHGT Governance Protocol is to administer the tournaments dynamic parameters, such as commissions %, distribution proportions, etc. and to support or reject voting proposals relating MEHG ecosystem development by MEHG community.

Winner of the tournament gets ALL deposited BUSD funds except those distributed to Operational Vault (15%). The latter's funds are to be used to cover operational expenses related to protocol and infrastructure support.

NFTs game consists of tournament score weight and information and can be minted with MHGT nominated minting fee by a player request.

MHGT Governance Protocol is to administer the tournaments dynamic parameters, such as commissions %, distribution proportions, etc. and to support or reject voting proposals relating MEHG ecosystem development by MEHG community.

## 11 MEHG Staking & Authorization Level Access

To be admitted to higher level tournaments and get gaming privileges including rating, Governance, Staking Rewarding and Customized partner's tournaments, the MEHG or NFT staking is required. A user can either win an NFT in a tournament, purchase it during Initial NFT Offering or secondary market. Another option is to stake the relevant quantity of MEHGT tokens.

NFT	MEHG staked (BUSD Equivalent)	Gaming (Tournament Score)	Authorization Level	Privileges
Member	\$75	≥1,000	"Member"	Staking Reward + Rating + Governance.
Pro	\$200	≥10,000	"Professional"	Staking Reward + Level 2 Tournaments + Governance
Expert	\$1,000	≥100,000	"Expert"	Staking Reward + Level 3 Tournaments + Governance
Governor	\$8,000	≥1,000,000	"Governor"	Staking Reward + Level 4+ Customized Partner's Tournaments + Governance

Apart from authorization level access, an MEHGT holder can benefit from MEHGT staking reward.

MEHGT offers its investors to stake their tokens/NFT and get rewards. Staking is the process of locking tokens in a smart contract, in order to reduce the circulating supply of the tokens.

In return for locking up the tokens, stakers receive rewards, the size of which depends on the staking period.

MEHGT Staking will be announced shortly...

Priod	180 Days	90 Days	30 Days
API	45%	30%	15%
Max Pool	Limited	Limited	Limited

## TERMINOLOGY

**Period:** The time period MEHGT tokens are held under a vault for staking;

**APY (Annual Percentage Yield):** The real percentage of growth that will be earned in compound interest assuming that the tokens are deposited for a year.

**Maximum MEHGT Token Pool Size:** The maximum MEHGT tokens to be staked in the vault.

**Lock-in Period:** Lock-in time period during which the tokens cannot be withdrawn from the vault.

## ⑫ MEHGT Governance

All Governance NFT holders are the Official Heads of the Meta Elite Hunger Games Project Governance Administration functioning above the Governance Committee.

All token holders with the authorization levels starting from “Member” and above are eligible to participate in the project governance committee.

All MEHG members that stake MEHGs are forming a MEHGT governance committee that is authorized to modify MEHGT Protocol dynamic parameters and to support or reject voting proposals.

The number of committee members is determined by a number of

wallets that are staking MEHGT or MEHG Tribute NFTs:

$$N_{\text{committee}} = N_{\text{wallets}} (\geq \text{"member" access level})$$

All token/NFT holders with the authorization levels starting from “Member” and above are eligible to participate in the project governance committee.

## 12.1 AN OVERALL VOTING MODEL

When voting, the value of a token's vote will be determined not only by its numerical weight, but also the length it has been held by the owner and presented by each member Weighted Voting Power (WVP).

$$\text{WVP} = \frac{\text{MEHGTs (amount)} + \text{NFT (value)}}{\text{MEHGTs (staking)} + \text{NFT (staking)}} \times \frac{\text{P(staking)}}{\text{P(circulation)}}$$

Where:

MEHGTs(amount) – the amount of MEHGTs staked

MEHGTs(staking) – the amount of all MEHGTs staked

NFT(value) – the sum of NFT nominal staked

NFT(staking) - the amount of all NFTs nominals staked

P(staking) – the period of MEHGT/NFT token staking prior to voting

P(circulation) – the period of MEHGT/NFT tokens circulation

Each committee member can withdraw their funds from staking at any time at their discretion, and stake again. However, if the staking was interrupted, the P(staking) period is deemed to be restarted too.

When voting, all committee members' WVPs are summed, and when a proposal receives a simple majority of overall WVPs score, it is deemed to be approved and the new protocol parameters will be

applied or voting proposals are deemed to be confirmed.

$$\text{If } \sum_1^{\text{PV}} WVP \triangleright \frac{1}{2} \times \sum_1^{\text{AV}} WVP = \text{Approved}$$

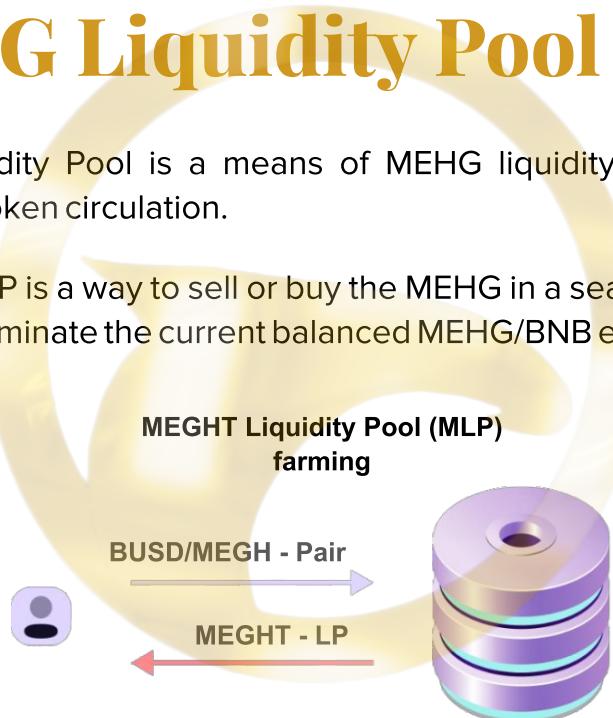

$\sum_1^{\text{PV}} WVP$  - Sum of positive votes weight

$\sum_1^{\text{AV}} WVP$  - Sum of all votes weight

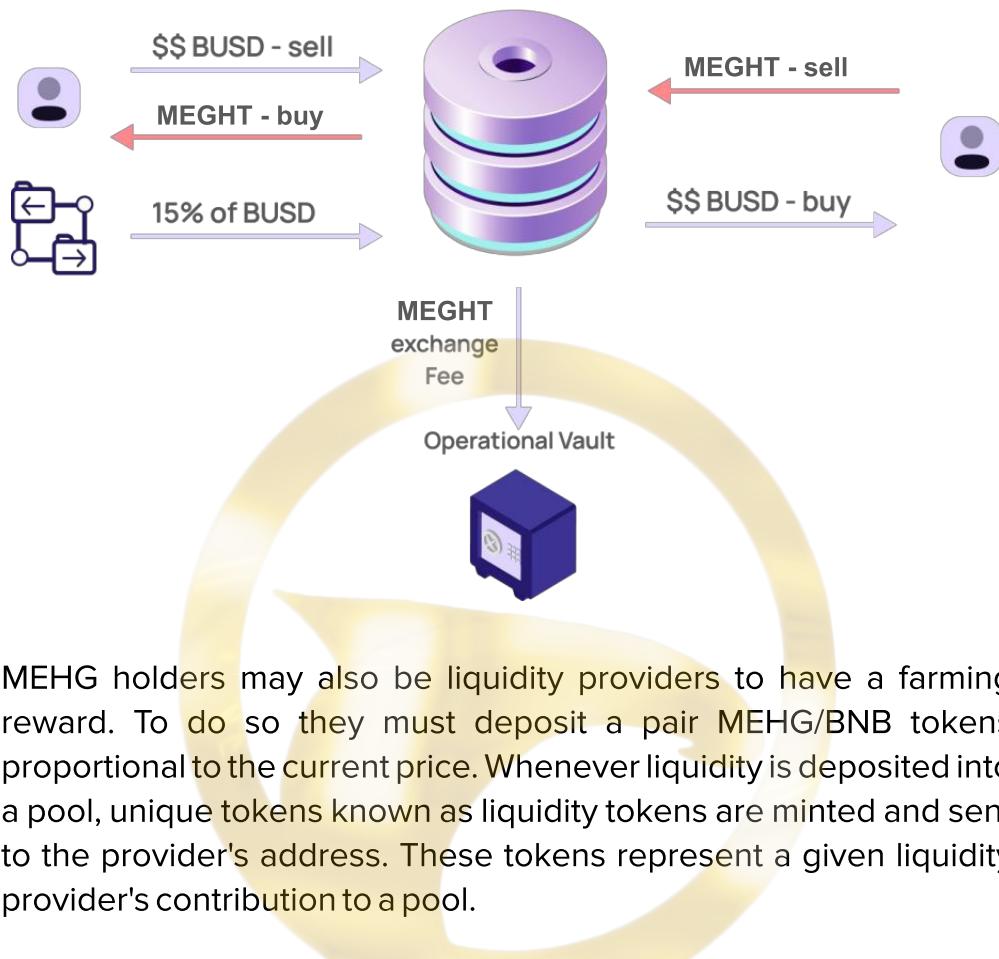

## ⑬ MEHG Liquidity Pool

MEHG Liquidity Pool is a means of MEHG liquidity support and secondary token circulation.

The MEHG LP is a way to sell or buy the MEHG in a seamless way as well as determinate the current balanced MEHG/BNB exchange rate.

### MEGHT Liquidity Pool (MLP) exchange

### MEGHT Liquidity Pool (MLP) farming

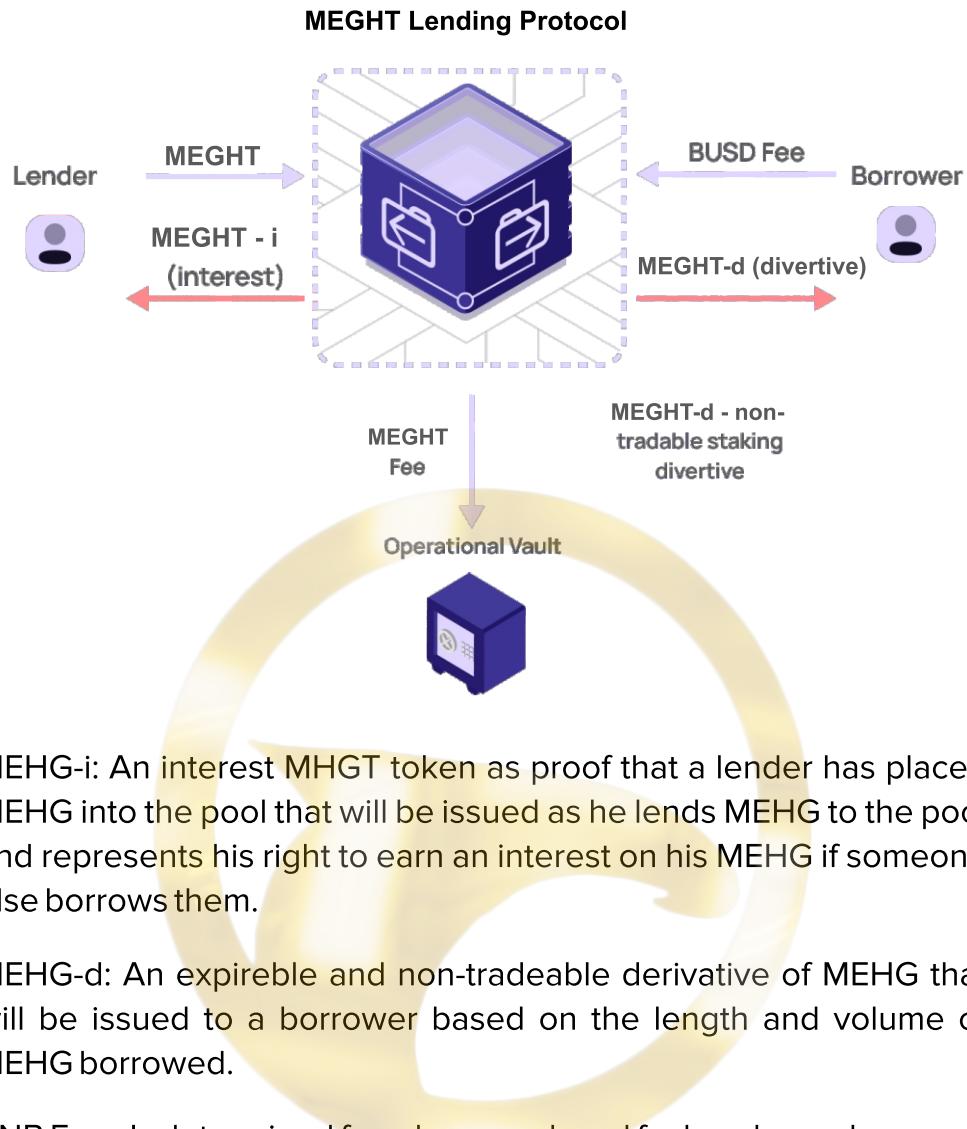

## 14 MEHGT NFT

MEHG NFT is a unique and non-interchangeable unit of data stored on a BSC blockchain. There are two types of NFTs: Governance and Tribute NFTs which gives an access to the authorization levels, rating, staking rewarding, governance and governance rewarding. Partner NFT lets also make your customized tournaments;

- a. Staking reward.
- b. Access to high levels tournaments that otherwise would require min ration or MEHG staking.
- c. Participation in the standardized rating.
- d. Governance participation.
- e. Other exclusive offerings for NFT holders' that will revealed later.

## 15 MHGT Lending Protocol

The MEHG Lending Protocol - A pool attached to an audited smart contract to supply extra liquidity to MEHG ecosystems and to give extra incentives to our community:

MEHG-i: An interest MHGT token as proof that a lender has placed MEHG into the pool that will be issued as he lends MEHG to the pool and represents his right to earn an interest on his MEHG if someone else borrows them.

MEHG-d: An expireble and non-tradeable derivative of MEHG that will be issued to a borrower based on the length and volume of MEHG borrowed.

BNB Fee - Is determined from how much and for how long a borrower would like to lend the MEHG and what is the balance between lent and borrowed MEHG tokens in the pool already - the more borrowed the higher the fee.

In the MEHG lending protocol, a borrower will have no need for collateral, and so there is no risk associated with borrowing.

The lender always gets their interest paid in more MEHG-i, so that you can either withdraw MEHG from the pool or let your portion in the pool just keep growing.

# 16 Emission And Circulation Of The MEHGT Token

## 16.1 TOKEN SALE

There are three rounds of token sale: a closed (private), public round and a round of pre-sale sale of MEHG tokens with different locking periods. All unsold tokens will be burned and will be available only when purchased from the secondary market - thus forming a deflationary growth model for the MEHG value.

Total supply - 100 million MEHG

MEHG's value will be nominated/pegged to the Binance Smart Chain (BNB).

Nominal Price (The final public sale price) = 1 MEHG = \$ 0.15 (0.0004 BNB)

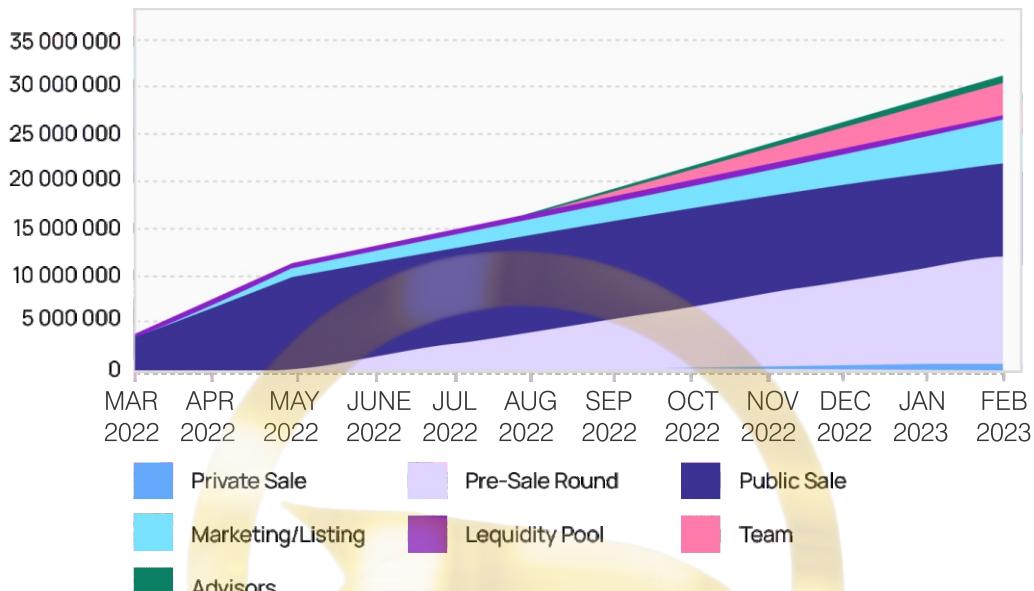

After the end of the public MEHG sale round, all unsold MEHGs with the exception of those allocated to the team and others (marketing, foundation, ecosystem) will be burned by calling the burn function. The MEHG coin burn transaction can be verified using the transaction explorer.

## 16.2 TOKEN DISTRIBUTION AND FUND ALLOCATION

	Supply	Total Supply %	Price Per Token	USDT To Be Raised	TGE	Unlocking Schedule	Full Unlock Period
Closed Round (Seed Sales)	4,500,000	4.50%	\$0.04	\$180,00	5%	2 months cliff then vesting over 2 months	4 months
Private Round 1	3,000,000	3%	\$0.06	\$180,000	5%	Linear Unlock	2 months
Private Round 2	3,500,000	3.50%	\$0.075	\$262,500	10%	Linear Unlock	2 months
Public IDO	10,000,000	10%	\$0.15	\$1,500,000	30%	Linear Unlock	1 month
DEX Listing			\$0.25			All Funds Locked	1095 days
<b>Total</b>	<b>21,000,000</b>	<b>21%</b>		<b>\$2,122,500</b>			

## 16.3 TOKEN UNLOCKING

The unlocking schedule for MEHG tokens ensures their gradual inflow into circulation and is limited to a maximum volume of 100 million MEHGs, thereby limiting the volume in circulation.

## 17 Airdrop And Ambassador Incentive Program

### 17.1 MARKETING INCENTIVE REWARD AND SHARING

In exchange for performing promotional activities on behalf of the protocol, MEHG offers participation on Pre-sale. The special MEHG token allocation (1,000,000 MEHG Round) equal to 150,000 USD allocation will be distributed proportionally among participants according to the points collected by participants during the

campaign.

- All users are eligible for Marketing Incentive Sharing. Referral link will be available after registration through our referral BOT, The users are accounted for;
  - 5% of all linked users' MEHG tokens purchase nominated in MEHG;
  - 10% of all linked users' tournaments deposits for 12 months;
- All participants who collects minimum 10 points also eligible for the limited Marketing Incentive Reward;
  - 1,000,000 Airdrop and Ambassador MEHG token distribution.
  - Whitelisting and allocation to Pre-sale

## 17.2 POINTS SYSTEM

### Referrals:

- 3 Referrals per days or 21 referrals per week + 21 points.
- 100 Referrals per week + 150 points.

### Twitter:

- 4 Retweets or mentions per week +10 points.
- 1 Tweet containing helpful information about CEX/DEX MEHG trading, MEHG tournaments' achievements including MEHG Twitter mention +15 points.
- Tagging 5 friends in a tweet with #MEHG\_Champion + a mention of @MEHG\_Official + 5 points.
- Selfie post with MEHG identity + #MEHG\_Champion +15 points.
- Comment under influencer's tweet with #MEHG\_Champion (Influencer must have more than 20k followers).

**Specification for the influencer tweet:**

<300 Followers x 0 (means zero points).

300 - 2000 Followers x 1 points.

2001 - 5000 Followers x 2 points.

5001+ Followers x 3.

- All the tweets should have hashtags: otherwise, the participant will earn zero points.
- All posts should be unique.

**Telegram:**

- Add “MEHG\_Champion” to your name in TG (e.g., "John MEHG\_Champion") +10 points per week.
- Add a link in bio [twitter.com/MEHG\\_Official](https://twitter.com/MEHG_Official) + 10 points per week.
- 3 post per week per one Telegram crypto group above 5k subscribers + 5 points.

**Reddit:**

- 5 Upvotes of our post +5 points.
- 5 Reports of our post +5 points.
- 3 Post about MEHG with mentioning of MEHG +3 point.
- Follow is a must.
